

2 TWO PROVEN TECHNOLOGIES TO REDUCE YOUR HEALTHCARE COSTS & INCREASE EMPLOYEE PRODUCTIVITY

1stCare MD's telemedicine expertise benefits you & your employees:

- Much lower cost per encounter for primary care type visits
- 24/7 access to U.S.-licensed physicians
- Reduce unnecessary ER visits (huge savings here)
- Simple billing options & services available to all your employees

It's time to explore how telemedicine can save you money while offering your employees convenient medical treatment. The American Wellness Council determined that 70% of all primary care visits could be handled just as effectively with telemedicine and at notably reduced costs.

1stCare MD'S Premier Patient Portal

Through our Premier Patient Portal, our members enroll by completing the same forms they would fill out anytime they visit a new doctor. Their medical history is now complete, secure and always available to them and their network physicians. When they need a doctor, they call or log-in to the portal, report their current ailment and request an appointment. Patients can choose to conduct the consult over the phone or through our secure video conference system.

Our Premier Patient Portal gives your employees convenient, quick access to a variety of physicians, including specialists, without sacrificing any of the quality of a traditional doctor's appointment. It is ideal for a range of patients, especially those with limited physical mobility, young children, tight schedules or lacking reliable access to transportation.

Affordable Plans, Exceptional Cost Savings

Standard monthly membership fees for unlimited access to 1stCare MD's physicians are \$19.95 per individual or \$29.95 per family. Ask us about corporate discounts up to 30%.

For companies that want to significantly reduce their internal healthcare costs, we have a plan that charges only for the actual encounters performed with no monthly fees. You simply provide a 1stCare MD membership to your employees on a no-cost basis and offer them a lower co-pay to incent them to use the service.

1stCare MD collects the co-pay from the employee and bills your corporation for the remainder to equal a \$49 fee per encounter.

On-Site Clinic

Considering opening an on-site clinic for your employees or currently operating one? Evaluate the benefits of the 1stCare MD on-site telemedicine clinic to learn how much you could save.

By selecting 1stCare MD, you can use telemedicine technology to dramatically reduce the operating expenses of on-site clinics while increasing the quality of care and expanding the services that can be provided to patients, especially compared to doc-in-the-box centers.

How it Works

Using telemedicine, we deliver valuable medical services at a lower cost by leveraging a single physician resource across multiple clinics supported by advanced diagnostic equipment.

The 1stCare MD clinical visit is centered on quality and trust. Patients are greeted by a medical professional and treated by a licensed practicing physician who is often on-duty in a local hospital emergency room.

A full-time nurse or clinical assistant staffs the clinic and is responsible for greeting the patient, operating the equipment, administering basic medicine, explaining the treatment plan, processing insurance claims and collecting fees.

FDA-approved remote diagnostic equipment provides the physician with state-of-the-art capabilities and accuracy beyond what most primary care physicians use in their daily practice. This equipment is currently operating in over 700 facilities.

Our Physician Network—A Key Difference

We have teamed with QuestCare Partners, which manages more than 20 emergency rooms and urgent care centers that treat over two million patients per year. Plus, we have hundreds of private physicians and specialists, which means the best expertise is always available to you and your employees. 1stCare MD partners only with highly qualified, U.S. board-certified physicians licensed in the states in which they practice.

The economics of 1stCare MD clinics benefit patients, insurance providers and employers. Using telemedicine, we deliver valuable medical services at a lower cost by leveraging a single physician across multiple clinics. So, while our operating costs are lower than clinics that have on-site nurse practitioners, our level of service is superior.
